DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-17, drawn to a method for stimulating kidney tubule formation by using Wnt or its agonist.

Group II, claim(s) 1 and 18, drawn to a method for stimulating kidney tubule formation by using a particular polypeptide sequence.

Upon election of Group II, Applicant is additionally required to elect a single sequence to be examined on the merits. This requirement is not to be construed as a requirement for an election of species, since each of the polypeptide recited in alternative form is not a member of a single genus of invention, but constitute an independent and patentably distinct invention. They require different search and has different patentable weights.

Group III, claim(s) 19, drawn to a method of stimulating kidney tubule formation by using a purified nucleic acid molecule encoding Wnt polypeptide or Wnt agonist.

Group IV, claim(s) 20, drawn to an ex vivo mammalian kidney.

Upon election of Group I or III, Applicant is additionally required to elect a single polypeptide selected from group consisting of (1) Wnt-1, (2). Wnt-3, (3). Wnt-4, (4). Wnt-7a, (5). Wnt-7b and (6) agonist to be examined on the merits. This requirement is not to be construed as a requirement for an election of species, since each of the polypeptide recited in alternative form is not a member of a single genus of invention, but constitute an independent and patentably distinct invention. They require different search and have different patentable weights.

2. The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the technical feature of claimed invention is drawn to a method of kidney tubule formation by using Wnt polypeptide or Wnt agonist. However, this

Art Unit: 1648

feature has been disclosed in the prior art as evidenced by Humes et al. (US patent NO. 5,686,289A). Humes et al. teach a method for growing renal tubule cells ex vivo comprising culturing kidney cells in a medium containing Wnt-1 or Wnt-4. Therefore, the claimed inventions lack common technical feature among different groups.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
